

SharePoint 2013 Dev with CSOM and REST – Search

Rob Windsor
@robwindsor

Outline

- **Keyword Query Search**

Search

■ Client Object Model

- Microsoft.SharePoint.Client.Search.dll or SP.Search.js
- KeywordQuery and SearchExecutor

■ REST API

- GET
- `/_api/search/query?queryText='<query>'`

CSOM:

```
var queryText = "boxes";  
var query = new KeywordQuery(context);  
query.QueryText = queryText;  
  
var exec = new SearchExecutor(context);  
var results = exec.ExecuteQuery(query);
```

REST:

```
var queryText = "boxes";  
  
var call = jQuery.ajax({  
    url: _spPageContextInfo.webAbsoluteUrl +  
        "/_api/search/query?querytext='" + queryText + "'",  
    type: "GET",  
    dataType: "json",  
    headers: {  
        Accept: "application/json;odata=verbose"  
    }  
});
```

Summary

- Keyword Query Search
